SUMMARY

Data Scientist with hands-on experience in Python, SQL, machine learning, and marketing analytics. Proven ability to analyze complex datasets, optimize business performance, and translate insights into actionable strategies. Background spans digital marketing, sales leadership, and operations, bringing strong business context, communication skills, and analytical problem-solving to data-driven teams.

SKILLS

Python | SQL | Scikit-Learn | Data Analysis | Data Visualization | Jupyter | A/B Testing | Churn Analysis | EDA | Tableau

TECH PROJECTS

Oil Well Profit Optimization & Risk Analysis | 12/25 |

Engineered an end-to-end predictive modeling and statistical risk analysis pipeline to maximize expected profit for oil well development under uncertainty and financial constraints.

- Trained and evaluated linear regression models in Python (pandas, scikit-learn) to predict oil reserve volumes across multiple regions, using a 75/25 train-validation split and RMSE for model assessment.
- Formulated a constrained optimization approach to rank model predictions and select top-performing candidates, maximizing expected profit under fixed budget and sample-size constraints.
- Applied non-parametric bootstrapping (1,000 resamples) to quantify uncertainty in profit estimates, computing confidence intervals and probabilistic loss metrics.
- Conducted risk-aware model comparison to identify the region with the highest expected return while satisfying statistical loss thresholds (<2.5%).

Instacart Customer Behavior & Reorder Analysis | 10/25

Executed end-to-end data cleaning and exploratory analysis on large-scale transactional data to quantify customer purchasing patterns and product-level reorder behavior.

- Built a reproducible data preprocessing workflow in Python (pandas, NumPy) to parse nonstandard CSV formats, enforce schema consistency, handle missing values, and deduplicate records across five relational tables.
- Conducted statistical and distributional analysis of temporal ordering behavior (hour-of-day, day-of-week, inter-order intervals), validating feature ranges and identifying demand patterns and anomalies.
- Derived customer- and product-level behavioral features (order frequency, basket size, reorder proportion, first-cart placement rate) using multi-key joins and aggregation logic.
- Visualized and compared behavioral distributions across customer cohorts and time windows using matplotlib/seaborn to support downstream modeling and product analytics use cases.

EXPERIENCE

Proclaim Promotions | Digital Marketing Analyst | 04/25 - Present | Concord

Skills Used: AB Testing, Data Analysis, Business Analytics

- Analyze marketing and customer data to optimize digital campaigns for automotive dealerships, improving engagement and revenue.
- Evaluate KPIs, customer behavior, and A/B test results to refine multi-channel marketing strategies.
- Develop data-informed targeting and segmentation frameworks to improve conversion performance.
- Partner with sales and operations teams to align insights with business objectives and growth initiatives.

American Income Lifel Supervising Agent | 01/21 - 04/25 | Remote

Skills Used: KPI Design, Data Driven Decision Making, Statistical Thinking

- Led and developed teams using performance metrics and sales KPIs to improve productivity and outcomes.
- Applied quantitative and qualitative analysis to client needs assessments and policy recommendations.
- Leveraged CRM data to improve client retention, engagement, and strategic outreach
- Monitored trends to refine sales strategies and consistently meet or exceed targets.

EDUCATION

TripleTen | Data Science | 07/24 - Present

- Project-based program covering Python, SQL, machine learning, Tableau, A/B testing, and predictive modeling. including revenue analysis, customer churn prediction, and regional performance comparison.
